

SOPHIA DAO

Arlington, Texas | sophia_khanh@hotmail.com | www.linkedin.com/in/skdao | github.com/sophia-dao/sophia-dao/

SUMMARY

- Strong programming language knowledge, including Python, Java, and JavaScript/TypeScript programming with hands-on development in backend systems, full-stack applications, and cloud-based platforms
- Effective communicator, detail-oriented worker with exceptional organizational and analytical skills
- Strong collaboration and problem-solving skills to work in a collegial environment, willingness to learn and develop professionalism

EDUCATION

Master of Science in Computer Science

University of Texas at Arlington | TX

Dec 2027

Bachelor of Science in Computer Science

University of Texas at Arlington | TX

Dec 2024

EXPERIENCE

Full-Stack Developer/ Webmaster

NUV Optimization | CT, USA

Mar 2025 – Dec 2025

- Architected and administered the company's web platform using React, Material UI, AWS EC2, and Vercel, focusing on performance, scalability, and security
- Integrated REST APIs and optimized frontend-backend communication to ensure smooth, scalable performance.
- Troubleshoot technical issues, apply regular updates, and maintained website security protocols.

Web Developer Intern

TRG International | Vietnam

Jul 2024 – Oct 2024

- Optimized structure and design of the company's customer support portal, achieving 30% reported improvement to user experience
- Conducted thorough quality analysis and manual testing to identify usability issues, perform functional testing to ensure requirement satisfactory

PROJECTS

Sorting Algorithm Visualizer and Benchmarking Platform – Software Engineer

Full-Stack Web Application | Java, Spring Boot, React, Material UI, REST API

Apr 2026

- Developed a full-stack sorting visualization and benchmarking platform using Spring Boot and React
- Implemented REST APIs and interactive visualizations for multiple sorting algorithms and runtime benchmarking
- Designed educational workflow visualizations and algorithm comparison features using Material UI

Global Supply Chain Stress Index (GSSI) – Backend Developer

FinHack Project | Django, FastAPI, TensorFlow, Pandas, React, MUI

Apr 2026

- Led a team of engineering students to prototype forecasting, analytics, and visualization features under tight deadlines
- Developed backend services for a forecasting platform that analyzes economic and logistics indicators to generate a Global Supply Chain Stress Index
- Built FastAPI endpoints for data processing, forecasting workflows, and stress-level alert generation using machine learning models

Motion Tracking Animation Project - Software Engineer

UT Arlington | NuiTrack, Unity, opencv

Jun 2024 – Dec 2024

- Engineered motion tracking and skeletal animation workflows using Intel RealSense D435, NuiTrack SDK, and Unity
- Improved tracking performance by approximately 50% compared to previous OpenCV-based implementations
- Collaborated across Computer Science and Fine Arts departments at UTA to support interactive performance technology initiatives, with the final system utilized in the In/E Motion dance showcase

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, JavaScript, TypeScript, C, SQL, HTML, CSS, Liquid

Frameworks & Libraries: React, Django, Spring, Tailwind CSS, Material UI

Technologies & Platforms: AWS, MySQL, Maven, Gradle, Git, Atlassian Jira, SAP, Freshdesk, WordPress, XAMPP, Figma, Canva

Other Tools: MATLAB, LabVIEW, GAMS, Microsoft Office, Google Analytics
